PROFILE

I am a final-year Computer Science undergraduate (graduating 2026) with a keen interest in AI, Machine Learning, and software development. I have worked on projects spanning real estate analytics, travel recommendations, ride-matching platforms, and Java-based applications, building skills across the full ML pipeline — from data preprocessing to model evaluation. Through internships and training programs, I have gained knowledge in agentic AI, data science workflows, and professional software practices. I am looking to grow in a Software Engineering or AI/ML role where I can apply what I know and keep learning.

TECHNICAL SKILLS

Programming: Python, Java, Object-Oriented Programming (OOP)

AI & Machine Learning: Machine Learning, Model Training, Feature Engineering, Data Preprocessing, Regression, Classification, Clustering

Databases & CS Fundamentals: SQL, DBMS, Data Structures & Algorithms

Tools & Platforms: Git, GitHub, Google Colab, Java Swing

EDUCATION

B.Tech – Bachelor of Technology, Computer Science & Engineering (2022 – 2026)

KG Reddy College of Engineering and Technology — CGPA: 8.0 / 10

Senior Secondary (XII) (2022)

Aakash Institute — 83%

Secondary (X) (2020)

International School Shaikpet — 70%

INTERNSHIPS & TRAINING

Management Trainee Intern — On-site | Samyak Eco Solutions LLP (Dec 2025 – Apr 2026)

- Assisted in **testing internal dashboards** and software tools — **documenting bugs**, validating UI functionality, and maintaining **test logs** — while also preparing **technical process documentation** to standardize operational procedures.
- Developed **professional communication skills** through client-facing correspondence, team meetings, and cross-functional collaboration, upholding company values of accountability and sustainability.

Agentic AI: From Learner to Builder — Virtual | IBM SkillsBuild & CSRBOX Foundation (Jul 2025 – Aug 2025)

- Studied **AI agent architecture**, agent types, and **decision-making workflows**, covering how agents perceive environments, execute multi-step tasks, and apply **ethical design principles** in real-world deployment.
- Learned **prompt engineering** techniques and **Retrieval-Augmented Generation (RAG)** to build context-aware intelligent systems, explored through use cases like HR virtual assistants and **automated procurement workflows**.

Mastering Data with Machine Learning — Virtual | IBM SkillsBuild (Oct 2024 – Nov 2024)

- Worked through a structured **data science pipeline** — covering **data collection**, **cleaning**, and **exploratory analysis** — with a focus on **data visualization** using Python.
- Applied **supervised and unsupervised learning** techniques including **regression**, **classification**, and **clustering** on real-world datasets, with a focus on **feature engineering** and **model evaluation metrics**.

AI Job Simulation — Virtual | Cognizant (Forage) (Jul 2024)

- Performed **exploratory data analysis (EDA)** on a retail supply chain dataset using **Python and Google Colab**, then built and evaluated a **machine learning model** to address a business problem, preparing a production-ready **Python module** with performance metrics.
- Communicated **analytical findings** and model results through structured presentations and written reports, simulating professional **data science team deliverables**.

Technology Job Simulation — Virtual | Deloitte (Forage) (Jul 2025)

- Worked through consulting-style technology tasks covering **requirement analysis**, **software development planning**, and **structured documentation**, simulating real-world project delivery at a professional services firm.
- Strengthened **analytical thinking** and **problem-solving skills** through scenario-based exercises in platform engineering and coding, with a focus on clear professional communication.

PROJECTS

AI Carpooling Platform for Safer, Smarter Urban Travel (Jul'25 – Apr'26)

- Designed an **AI-enabled ride-matching platform** that connects users based on **route similarity**, **travel preferences**, and **safety requirements**, using **ML-based recommendation logic** to improve matching accuracy for women, students, and working professionals.
- Integrated **user verification**, **preference-based filtering**, and ride trust mechanisms as safety features, and built **backend workflows** for managing ride requests, user profiles, and real-time operations using **Python-based ML pipelines**.

Smart Property Discovery & Market Insights System (Jul'24 – Apr'25)

- Built an **ML-driven real estate analytics platform** for **property price prediction** and **market trend forecasting** using **regression techniques** and **feature engineering** on property datasets.
- Designed an interactive system for users to compare properties and make **data-driven investment decisions** based on **historical market pattern analysis**.

Travel Destination Recommender System (Jul'23 – Sep'23)

- Built a **recommendation engine** using **KNN**, **Random Forest**, and **Decision Tree** algorithms, comparing model performance to select the best approach based on **accuracy** and **evaluation metrics**.
- Performed **data cleaning**, **feature extraction**, and model tuning to generate personalized recommendations based on user budget, interests, and travel preferences.

Expense Tracker Application (Apr'23 – Jun'23)

- Developed a **Java-based expense management application** with both console and GUI interfaces using **Java Swing**, applying **OOP principles** for a modular and maintainable architecture.
- Implemented features for recording, **categorizing**, and **tracking financial transactions** with automated expense summary generation.

CERTIFICATIONS

AI for Everyone – DeepLearning.AI (Coursera) | Python for Everybody – Coursera | Data Science with Python – IBM | SQL & Relational Databases – IBM | Basic Python & Java – HackerRank

EXTRA-CURRICULAR ACTIVITIES

- President, Dance Club — demonstrated leadership, team coordination, and event management through planning and executing large-scale performances.
- Active member of Photography Club and Sports Club.
